

Basic Guide for Antenna Installation

Distance to Walls

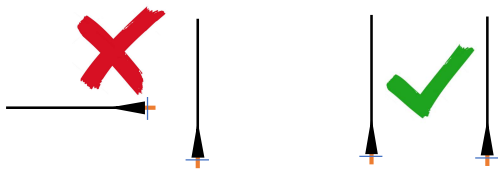

Must be no less than 10cm between the antenna and walls or metal structures.

Distance Between Antennas

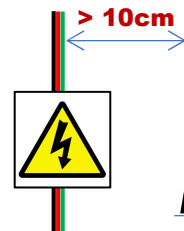

Must be no less than 1m between any two antennas belonging to any network.

Orientation of Antennas

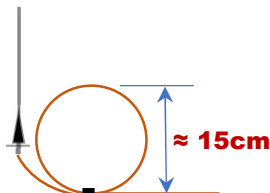

Keep all antennas orientated the same way

Keep away from Cables

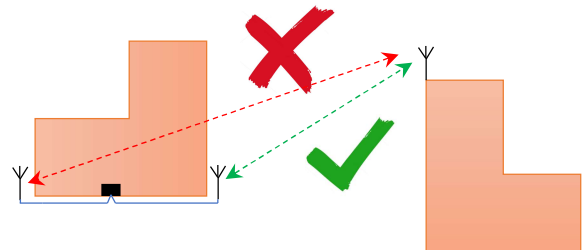

Must be no less than 10cm distance between antennas and other cables or ducting.

Spare Cable

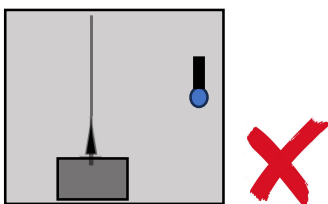

Always make a loop with the antenna cable before the antenna to ensure there is enough cable in case of repairs.

Line of Sight

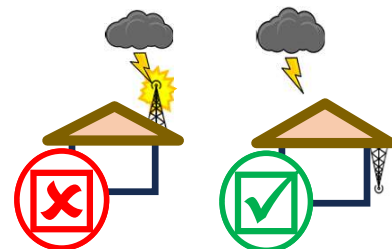

Always try to mount antennas in such a way there is a clear line of sight between them.

Don't place in enclosed areas

Do not mount antennas inside cabinets or enclosed rooms made of concrete

Lightning Avoidance

Do not mount antennas as the highest point on rooves or within 45° of the roof structure.
